Monthly Chemical Meeting Q3 draft 4 17 17 wiht OPs (003).pptx

Jill,

Billy has left and I did not get the information to finish the slides before he left. I told Billy and he said that we could wait until tomorrow morning. Actually this morning since you are reading this now.

Rosaura sent a new slide number 7 and it is in the slide deck.

For carbaryl, I know Billy said not to worry about a slide since we have briefed management so many times on it. He was thinking that we could just take out the carbaryl slide. However, they have briefed the human health assessment many times and never the ESA assessment. On slide 4 we have carbaryl ESA only. So Linsey and Tracy are looking into the EFED stuff. You saw that Linsey sent a slide with basic information on carbaryl. This is probably good enough because it provides the schedule for the ESA stuff. They are just waiting for two numbers for the slide.

I have added the slide to the slide deck without the EFED numbers for now. Maybe we will get them early tomorrow or this morning since you are reading this now and send it to Billy.

Cheers and hope the crown was good enough to put back on.

Tom
